Projects and Experience

PARALINE SOFTWARE JSC

- **Property Management & Lease Platform for a Japanese business client**

Overview

A monorepo-based property management platform with 3 independently deployable applications: an internal back-office system (Admin), a public property listing and appointment site (User SPA), and a multi - tenant payment

- **Role:** full-stack developer

- **Duration:** May 2025 – Jun 2026

- **Tech stack:** PHP 8.1 / Laravel 10 · MySQL 8.0 · Livewire · Alpine.js · Vue 3 · TypeScript · Pinia · Vite · AWS S3 · Socket.IO · Docker · Apache

Key Highlights

- Architected and developed a monorepo with 3 independent apps: Admin (SSR), User (SPA), and Pay (SSR + Socket.IO)
- Built and maintained CRUD modules using Laravel, Livewire, and Alpine.js
- Integrated third-party services: LINE Bot, Google Maps, GMO Payment, and Firebase FCM
- Implemented real-time screen synchronization across multiple connected clients using Socket.IO
- Handled data processing pipelines: CSV/Excel import/export, dynamic PDF generation, Queue Jobs, and batch processing
- Built QR code scanning to instantly resolve payment contracts across tenant environments
- Developed and maintained SPA features using Vue 3 (TypeScript, Pinia, Vue Router)
- Diagnosed and optimized slow database queries, improving overall system response time
- Self-configured Docker multi-container setup with SSL certificates and Apache reverse proxy for local development

• Car & Contract Management System for a Japanese Business Client

Overview

An internal web application managing the full lifecycle of vehicles – from registration and depreciation pricing to contract signing, payment tracking, invoice generation, and document storage. The system includes role-based access control, AWS S3 file integration, and PDF export capabilities.

- **Role:** Full-stack Developer

- **Duration:** May 2025 – April 2026

- **Tech Stack:** PHP 8.1 / Laravel 10 · Livewire 3 · MySQL 8 · AWS S3 · Vite · Apache

Key Highlights

- Built a multi-format file upload feature (PDF, DOC, Excel, images) with drag-and-drop and modal preview, integrated with AWS S3
- Developed route-level access control using a custom Laravel middleware tied to account permission types
- Implemented car duplication functionality with business-specific logic per management tab
- Extended car registration forms and history views with new status enums and database migrations

• Personal Portfolio Website | nvhai272.github.io

Overview

A single-page portfolio application built with Vue 3 and TypeScript, featuring bilingual support (Vietnamese/English), dark/light theming with OKLCH color system, and automated CI/CD | deployment to GitHub Pages

- **Tech Stack:** Vue 3 · TypeScript · Vite · Tailwind CSS · vue-i18n · GitHub Actions

Key Highlights

- Designed a fully responsive SPA with tab-based navigation, mobile bottom nav, and collapsible sidebar
- Implemented dark/light theme using OKLCH CSS custom properties mapped to Tailwind semantic tokens
- Added bilingual (VI/EN) support via vue-i18n with runtime locale switching and localStorage persistence
- Integrated GitHub API to dynamically fetch and display public repositories
- Configured GitHub Actions workflow for automated build and deployment to GitHub Pages on push to main
